MSI Perfects Delay Corrected PRO Channel Receivers Ideal for Digital ENG and the BAS Transition

Just in time for the BAS Transition, Modulation Sciences introduces a PRO Channel solution to IFB delay encountered in ENG. A new PRO Channel Receiver offers the flexibility to correct any delay issue encountered in the field. The PRO-3 PRO Channel Receiver, a 3rd generation product, incorporates four unique solutions for providing IFB to ENG field talent unimpeded by delay. MSI's PRO-3 is completely compatible with our 2nd generation PRO Channel Generator (PCG-II), so current users need not make an additional investment

Solution one: Correct your delay with DELcor™ technology. DELcor provides an additional audio channel from the studio to the field for carrying undelayed program audio. This undelayed program audio is mutually exclusive with the SAP Channel, although it does not employ the SAP Channel nor can it be received on conventional TV sets. The DELcor PCG-II generator includes a switcher to move seamlessly and remotely from the DELcor channel to the SAP Channel.

Solution two: Eliminate your delay with DELiminate™ technology. DELiminate is a unique application of squelch technology that silences the air talent's earpiece as soon as they start talking. This leaves the talent protected from the confusion caused by delayed program feeds, while allowing interrupts from the director to come through loud and clear.

Solution three: Combine DELcor with DELiminate for a powerful, effective solution to IFB delay in ENG operations, regardless of the origin of the delay.

Solution four: PRO Mix/Minus. Deliver up to six independent Mix/Minus feeds via TV subcarrier to six different remote ENG sites. A truly customizable option that can be mixed and matched to suit your ENG needs.

Of course the new PRO-3 receiver includes all the features of the 2nd generation PRO-II -- Selective Calling, Main Channel Push-down and antenna diversity *plus* front panel tunability, four user presets, a DELcor channel, and the DELiminate squelch, round out all the of the features necessary to provide true undelayed IFB to ENG field talent.

List Price \$3195, available immediately.
