## **Sinclair Broadcast Group Chooses Modulation Sciences to Monitor Their DTV Stations**

Sinclair Broadcast Group, one of the largest and most diversified television broadcast companies in the US, has purchased the MSI 8vsb Analyzer for ALL of its DTV stations.

A full featured, professional 8vsb analysis tool, the Modulation Sciences msi-4400 provides the Sinclair station engineers with the confidence that their digital television signal complies with the highest technical standards of the industry. With features like remote web access and control, eye pattern & constellation displays, complete tap weight analysis, data logging and user configurable alarms, it is easy to see why the 4400 is Sinclair's tool of choice.

"We worked very closely with MSI to develop this product. We purchased it for all of our stations because it is technically an excellent value and we think it will be a big industry seller," said Harvey Arnold, Director of Station Engineering, Sinclair Broadcast Group.

Judy Mueller, President of Modulation Sciences, comments that, "Having a group with the technical sophistication of Sinclair Broadcast Group choose our 8vsb Analyzer is a testament to the superiority of our product. We are excited about working with engineers of this caliber."

The msi-4400 is affordably priced at under \$10,000.
